this book investigates adaptive physical layer beamforming and resource allocation that ensure reliable data transmission in the multi antenna broadcast channel the book provides an overview of robust optimization techniques and modelling approximations to deal with stochastic performance metrics one key contribution of the book is a closed form description of the achievable rates with unlimited transmit power for a rank one channel error model additionally the book provides a concise duality framework to transform mean square error mse based beamformer designs e g quality of service and balancing optimizations into equivalent uplink filter designs for the algorithmic solution the book analyses the following paradigm transmission to receivers with large mse targets low demands is switched off if the transmit power is low the book also studies chance constrained optimizations for limiting the outage probability in this context the book provides two novel conservative outage probability approximations that result in convex beamformer optimizations

to compensate for the remaining inaccuracy the book introduces a post processing power allocation finally the book applies the introduced beamformer designs for satcom where interference from neighboring spotbeams and channel fading are the main limitations

what knowledge of mathematics do secondary school math teachers need to facilitate understanding competency and interest in mathematics for all of their students this unique text and resource bridges the gap between the mathematics learned in college and the mathematics taught in secondary schools written in an informal clear and interactive learner centered style it is designed to help pre service and in service teachers gain the deep mathematical insight they need to engage their students in learning mathematics in a multifaceted way that is interesting developmental connected deep understandable and often surprising and entertaining features include launch questions at the beginning of each section student learning opportunities questions from the classroom and highlighted themes throughout to aid readers in becoming teachers who have great math n sight m multiple approaches representations a applications to real life t technology h history n nature of mathematics reasoning and proof s solving problems i interlinking concepts connections g grade levels h honing of mathematical skills t typical errors this text is aligned with the recently released common core state standards and is ideally suited for a capstone mathematics course in a secondary mathematics certification program it is also appropriate for any methods or mathematics course for pre or in service secondary mathematics teachers and is a valuable resource for classroom teachers

this volume is an outgrowth of an international conference in honor of toshikazu sunada on the occasion of his sixtieth birthday the conference took place at nagoya university japan in 2007 sunada s research covers a wide spectrum of spectral analysis including interactions among geometry number theory dynamical systems probability theory and mathematical physics readers will find papers on trace formulae isospectral problems zeta functions quantum ergodicity random waves discrete geometric analysis value distribution and semiclassical analysis this volume also contains an article that presents an overview of sunada s work in mathematics up to the age of sixty

the two volume set lncs 5358 and lncs 5359 constitutes the refereed proceedings of the 4th international symposium on visual computing isvc 2008 held in las vegas nv usa in december 2008 the 102 revised full papers and 70 poster papers presented together with 56 full and 8 poster papers of 8 special tracks were carefully reviewed and selected from more than 340 submissions the papers are organized in topical sections on computer graphics visualization shape recognition video analysis and event recognition virtual reality reconstruction motion face gesture and computer vision applications the 8 additional special tracks address issues such as object recognition real time vision algorithm implementation and application computational bioimaging and visualization discrete and computational geometry soft computing in image processing and computer vision visualization and simulation on immersive display devices analysis and visualization of biomedical visual data as well as image analysis for remote sensing data
